## **NEW HIGH SECURITY TACTICAL CASES PERFECT FOR FIREARM TRANSPORT IN VEHICLES**

Carl Junction, MO -- Secure Firearm Products introduces a new High Security Tactical Case. The case features a dual high security locking system for locking the case and securing the case to a vehicle. It not only includes our exclusive push-button internal locking system with a Medeco® High Security Lock, but also offers a separate locking system that secures the case to a vehicle either on our docking station or by using our cable locking system. Multiple docking stations are available, enabling the cases to be mounted vertically, horizontally, or underneath the seat of a vehicle. The standard dual-locking system on shotgun and rifle size cases include separate locks and two keys per lock.

Other keying options include keying both locks alike with two-like keys and the option of a removable core-type lock for key control systems. The High Security Tactical cases come in all our standard sizes. While these cases were designed for military, law enforcement and Homeland Security in mind, they also are perfect for hunters and sportsmen who want extra security for their firearms and a case that can be easily transported.

Stop by the Secure Firearm Products Booth #1911 at the 2009 SHOT Show for a full demonstration.
